## Document Revision History

<b>Name</b>	<b>Date</b>	<b>Reason for Changes</b>	<b>Version</b>
Shafer, Sherry	3/13/2009	Approved by the User Council – Final.	1
Shafer, Sherry	4/1/2010	Annual review. Approved by the User Council – Final.	2
Shafer, Sherry	5/11/2011	Annual review/update. Approved by the User Council - final.	3
Shafer, Sherry	8/1/2012	Annual review/update. Approved by the User Council - final.	4
Shafer, Sherry	5/1/12013	Annual review/update. Approved by the Operations Management Office - final.	5
Shafer, Sherry	5/8/2014	Annual review/update. Approved by the Operations Management Office - final.	6
Shafer, Sherry	5/29/2014	Annual review/update. Approved by the Operations Management Office - final.	7
Shafer, Sherry	5/10/2016	Annual review/update. Approved by the Operations Management Office - final.	8

## **Acronyms and Definitions**

**Alaska Federal Executive Association (AFEA):** federal government entities, agencies and organizations, other than the Department of Defense, that operate on the shared ALMR system infrastructure.

**Abuse of User Privileges:** repeated violation of System guidelines, procedures, protocols, or violation of the Membership Agreement may result in termination of the Membership Agreement subject to the review and direction of the Executive Council. A decision by the Executive Council is final and non-appealable.

**Alaska Land Mobile Radio (ALMR) Communications System:** the ALMR Communications System, which uses but is separate from the State of Alaska Telecommunications System (SATS), as established in the Cooperative Agreement.

**Alaska Municipal League (AML):** a voluntary non-profit organization in Alaska that represents member local governments.

**Department of Defense – Alaska:** Alaskan Command, US Air Force and US Army component services operating under United States Pacific Command and United States Northern Command.

**Executive Council:** the ALMR Executive Council which is made up of three voting members and two associate members representing the original four constituency groups: the State of Alaska, the Department of Defense, Federal Non-DOD agencies (represented by the Alaska Federal Executive Association), and local municipal/government (represented by the Alaska Municipal League and the Municipality of Anchorage).

**Local Governments:** those Alaska political subdivisions defined as municipalities in AS 29.71.800(13).

**Member:** a public safety agency including, but not limited to, a general government agency (local, state or federal), its authorized employees and personnel (paid or volunteer), and its service provider, participating in and using the System under a Membership Agreement.

**Municipality of Anchorage (MOA):** the MOA covers 1,951 square miles with a population of 300,000 plus. The MOA stretches from Portage, at the southern border, to the Knik River at the northern border, and encompasses the communities of Girdwood, Indian, Anchorage, Eagle River, Chugiak/Birchwood and the native village of Eklutna.

**Operations Manager:** the Operations Manager represents the User Council interests and makes decisions on issues related to the day-to-day operation of the

system and any urgent or emergency system operational or repair decisions. In coordination with the User Council, the Operations Manager establishes policies, procedures, contracts, organizations, and agreements that provide the service levels as defined in the ALMR Service Level Agreement.

**Operations Management Office (OMO):** develops recommendations for policy, procedures, and guidelines; identify technologies and standards; and coordinates intergovernmental resources to facilitate communications interoperability with emphasis on improving public safety and emergency response communications.

**State of Alaska (SOA):** the primary maintainer of the SATS (the State's microwave system), and shared owner of the System.

**State of Alaska Telecommunications Systems (SATS):** the State of Alaska statewide telecommunications system microwave network.

**System:** the ALMR Communications System, as established in the Cooperative Agreement, and any and all System Design/System Analysis (SD/SA) and System Design/System Implementation (SD/SI) documents.

**System Management Office (SMO):** the team of specialists responsible for management of maintenance and operations of the System.

**User/Member:** an agency, person, group, organization or other entity which has an existing written Membership Agreement with one of the Parties to the Agreement. The terms user and member are synonymous and interchangeable.

**User Council:** the User Council is responsible for recommending all operational and maintenance decisions affecting the System. Under the direction and supervision of the Executive Council, the User Council has the responsibility for management oversight and operations of the System. The User Council oversees the development of System operations plans, procedures and policies under the direction and guidance of the Executive Council.

## **1.0 Purpose**

This document serves to define roles and responsibilities for the Alaska Land Mobile Radio (ALMR) Communications System Operations Management Office (OMO) and System Management Office (SMO) for improving communications and advancing the technologies employed with the ALMR System for the benefit of stakeholders and the agencies that utilize it.

## **2.0 Roles and Responsibilities**

### **2.1 User Council**

The User Council (UC) shall be responsible for:

- Approving new technologies
- Recognizing new communication needs, communicating System information, and addressing questions, complaints or providing clarification about the System and other topics to their represented agencies
- Determining whether improvements, changes, upgrades or additions are needed and assigning the OMO to develop a plan
- Formal approval of the Technology Procedure, and any substantial revisions hereafter

### **2.2 Operations Management Office**

The Operations Management Office (OMO) shall be responsible for:

- Keeping abreast of new technology developments, advancements, announcements, standards and operational best practices in LMR-related technology
- Developing and administering the management and operational processes and procedures required for the smooth operation of the System
- Reviewing current wireless technologies in the industry and evaluating their applicability to System functional and technical applications and agency requirements
- Evaluating mission requirements and how changing technology can be used more effectively
- Evaluating new technologies and briefing the UC regarding System applicability
- Developing a plan, in cooperation with the UC, for necessary modifications to existing System hardware/software
- Attending System/equipment testing or product reviews at the designated user facility, facilitating the test plan, verifying test procedures and validating documents, as applicable

## **2.3 System Management Office**

The System Management Office (SMO) shall be responsible for:

- Working closely with the OMO and the UC to develop a long-term ALMR technology plan
- Providing a technology review and management presentation on current state of communications, considerations for planned upgrades or changes and current or future technologies available for consideration, at least annually

## **2.4 User/Member Agencies**

User/Member agencies shall be responsible for:

- Contacting the OMO to request research and testing of new technologies for compatibility on the System
- Submitting an ALMR System Change Request (CR) for review and approval prior to implementing any upgrade, change or addition to the System hardware/software

## **3.0 Standards**

### **3.1 SAFECOM**

SAFECOM defines a set of features that must be available in a public safety technology solution. These features range from defining the requirements for securing the communications network, to the command and control features for maintenance and operation of a system.

They include:

- Mobility
- Security for voice and data
- Call types (individual, multicast and group communications streams)
- Scalability
- Command and control
- Operations and maintenance
- Commercial off-the-shelf (COTS) products
- Standards-based design
- Backward compatibility
- Migration path for legacy equipment and systems
- Spectrum and network efficiency
- Ergonomic and environmental improvements (size, weight, hands-free, battery life, mil-standards, safety standards, etc.)

- Extensibility
- Modularity

The performance of the supporting technology solution needs to address:

- Quality of service
- Availability
- Reliability
- Survivability
- Restorability

### **3.2 Incident Support**

Technology is highly dependent upon existing infrastructure within a region. Multiple technology solutions may be required to support large events. Examples include:

- Swapping Radios
- Shared Channels
- Gateways
- Proprietary shared systems
- Standards-based shared systems

## **4.0 Procedures**

Before selecting a final technology solution, the following factors should be considered and thoroughly researched to ensure the product/equipment will meet the majority of the needs of the organization.

### **4.1 Impact**

Available technologies must be assessed for both the short- and long-term impact to operational requirements and implementation. Areas of consideration, when making a technology selection should include:

- Training requirements
- Cost and funding schedules
- Transition plans
- Compatibility with related equipment, such as networks which may not be replaced for an extended period (forward and backwards compatibility)
- Projected lifespan
- Interoperability with neighboring organizations
- Potential impact of technology upgrades/refreshes

## **4.2 Source**

The following items should always be evaluated when considering a technology source or a servicing vendor:

- A reputation of reliability
- Current functionality of supplied/installed systems and equipment
- Frequency of updates or changes during system installation
- Flexibility of the technology for system expansion and increased user requirements

## **4.3 Selection Criteria**

There may not be a single, available technology that meets all required or desired areas. Therefore, the assessment and final decision becomes a reasoned compromise for planning and setting expectations. Technology selections should be based on the following major considerations:

- Funding
- User requirements analysis
- Spectrum availability
- Existing resources

## **5.0 Compliance**

Compliance with the Technology Procedure is outlined in ALMR Technology Policy Memorandum 300-2.
