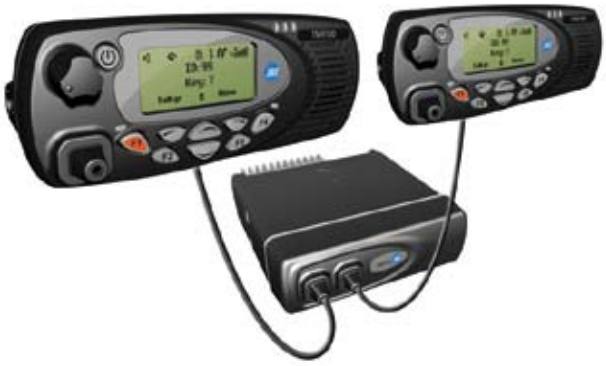
TM9155

SPECIFICATIONS



TM9155 P25 Mobile radio shown in optional dual head configuration

P25 TRUNKED AND CONVENTIONAL MOBILE RADIOS

With recognized encryption testing, certified interoperability, digital audio clarity and superb build quality the TM9155 is a tough, dependable and sophisticated mobile radio.

Interoperable, flexible, configurable

- FIPS 140-2 certified encryption
- Tested in DHS-approved P25 Compliance Assessment Program (P25 CAP) lab for interoperability and performance
- Radios can be used on analog, P25 conventional, trunked and simulcast networks
- Simplified System Key prevents 'unregistered' radios from being added to the network without prior consent
- Custom head colors, lenses and keypad graphics can simply differentiate multiple radios in a vehicle
- Secondary concealed microphone in control head
- Tested beyond MIL-STD 810C, D, E and F
- High temperature display option optimizes screen visibility in hot environments
- Lat/long coordinates displayed on screen (requires GPS receiver and SFE*)
- Program 1,000 channels, 300 scan groups and 30 tactical zones
- Comprehensive scanning features including P25 talk-group, priority, dual priority and editable scanning
- An extensive range of analog signaling features - MDC1200 encode/ decode** and Two Tone decode with the purchase of SFEs*

*Software Feature Enabler option available separately
**MDC1200 decode includes calling identity display and inhibit/uninhibit functionality

Encryption for secure communications
AES encryption certified by the US National Institute of Technology and Standards (NIST) or proven DES encryption can be incorporated into the TM9155 for highly secure communications. These radios can be encrypted fast in-field with a Key Fill Device (KFD) or with Over-The-Air-Rekeying (OTAR) via a Key Management Facility (KMF)*.

Flexible choices
Optional dual head configuration means the TM9155 can dynamically respond to vehicle and user needs.

Interoperability assured
The TM9155 is tested on other vendors' networks as part of the P25 Compliance Assessment Program (P25 CAP). This offers public safety and government agencies a multi-vendor environment which can save taxpayers' money.

Analog operation for phased transition
Protect your current analog investment and migrate to P25 at your own pace. Analog mode allows communication between various partner agencies.

Configure to suit with SFEs
Software Feature Enablers (SFEs) allow a solution that is readily extended as needs change, removing the risk of hardware upgrades and factory returns. Trunking, P25 CAI, encryption, Application Programming Interfaces (APIs) and OTAR are just some of the SFE options available.

*For further information on the KMF, please contact your local Tait representative

TM9155 Specifications

Standard control head with keypad microphone

Local hand-held control head

Dual head configuration with STN LCD for use in warmer climates

Dual head configuration with FSTN LCD for use in cooler climates
(a Control Head Interface Box is required)

Remote mounted standard control head

110W mobile

Being a manufacturer of digital and analog radios, base stations and network equipment means Tait has the solution focus to serve you better. Tait's P25 portables, mobiles and the hand-held control head all share the same intuitive interface.
